Thank you again for this!

It is perfect for my roguelike Game "Fox Arcana" that I'll release soon on Steam:

This helped me a lot to my game!

And obviously you are in the credits.

Hey! Pixel Combat gave me the combat sound effects for my game, Yuuna's Heroes — they hit hard and really sell the impact of the turret attacks. Thanks a lot for the pack! Here's the project if you want a look:

These sound so cool and retro, and it was so useful having them all in one pack because normally I hate finding SFX for my projects, and this made it really easy. My physics spaceflight game Super Cosmolite only uses SFX from this pack. Thank you!

I mean, I haven't even downloaded it yet, but I'm already slapping it with 5 stars based on the preview alone. Thank you for releasing this.

There are six variants of each sound, which is really thoughtful. It's so easy to juice up a game with non-repetitive effects thanks to that.

As for the sounds themselves, there are lots of blasts, whacks, lasers and bursts, plus surprising gems like jumps, whips, coins, and twinkles. All of them sound uniform in feel and volume and go together very well.

Overall, this is a pro-tier package, on par with paid SFX sets. It's really good.
